

Eyeseryl® Solution B

0.1% Acetyl Tetrapeptide-5 (1 g/L)

No Additives!

**THE Under Eye Bag Removing
Ingredient!**

Supplied as

INCI (USA): Water (and) Acetyl Tetrapeptide-5

INCI (EU): Water (and) Butylene Glycol (and) Acetyl Tetrapeptide-5

pH: 5.3 - 6.3 - **Preservative:** Butylene Glycol (42-58%)

Eyeseryl® is a tetrapeptide w/ anti-edema properties w/ proven efficacy in reducing puffy eyebags in as little as **15 days**. It can be incorporated in cosmetic formulations such as gels, serums, and emulsions where a reduction of puffiness under the eyes is desired.

As we age, skin loses its elasticity and muscles weaken which can cause loose skin to accumulate around the eyes, forming folds in the eyelids. Fat, which cushions the eyes in their sockets moves forward out of the ocular cavities and accumulates in bulging bags around the eyelids.

The other major reason for puffy eyes is water accumulation, known as edema, which can be caused by poor lymphatic circulation and increased capillary permeability. Taking an antihistamine could also be helpful to reduce bags.

Studies performed with Eyeseryl® at a very low concentration (1%) in order to define a minimum concentration for which an effect could be measured. Both eyebag volume and dark circles were moderately, but significantly reduced. Up to 10% of the solution can be incorporated into formulations to obtain significant eyebag-reducing activity.

Eyeseryl® Can be added at final stage, provided the temperature is below 40 °C (104 °F).

Use Rate 1% - 10%

Note the use rate is only 1% to 10% so it goes FAR!

Just add 6 drops (for 1%) to 60 drops (3/4 tsp. for 10%) to a 1 oz eye gel or cream and stir in~!

Enough to make 140 ml (or about 3.5 oz) at 2%

Add .6 ml (about 1/2 ml) to 1 oz (or 30 ml) cream at 2%
