

Haloxyl®

Haloxyl is a combination of active ingredients formulated to absorb and eliminate colored blood pigments in the skin that are responsible for dark circles under the eyes. It also has an anti-inflammatory effect and reinforces firmness and tone of the eye area.

Haloxyl reinforces firmness and tone of the eye area. It activates the elimination of blood-originated pigments responsible for dark circle color and local inflammation.

INCI: water, glycerin, steareth-20, N-hydroxysuccinimide, chrysin, palmitoyl Oligopeptide, palmitoyl tetrapeptide-7.

Actions: Haloxyl reduces undereye dark circles and reinforces firmness and tone of the eye area. In a study with 22 female volunteers the application of a gel containing 2% Haloxyl for 56 days resulted in an improvement of dark circles in more than 70% as assessed by image analysis and computerized measurement of color parameters.

Use Rate: 2% of total formula. Water soluble, incorporate at or below 45oC (113oF) to formulations. Add a few drops to a 1 oz water based cream or gel – just mix it in!

Great for dark-circle treatment products such as creams, gels and lotions, eye contour care and concealers.

Hope this helps! Re-order info:
